

Improving the UI and Adding Interactivity

Improving the UI (User Interface)

A good UI should be:

- Clean and readable
- Properly spaced
- Easy to understand
- User-friendly

Improve the Layout Using HTML + Bootstrap

```
@model MONTECILLO_LabActivity2.Models.Student @{ ViewData["Title"] =  
"Student Information"; } <div class="container mt-4"> <h2 class="text-  
primary mb-4">Student Information</h2> <div class="card p-4 shadow-sm">  
<p><strong>ID:</strong> @Model.Id</p> <p><strong>Name:</strong>  
@Model.Name</p> <p><strong>Course:</strong> @Model.Course</p> </div> </div>
```

- `container` centers content
- `card` groups related data
- `strong` improves readability

Adding User Interaction

Now we will allow users to:

1. Enter Id
2. Enter Name
3. Enter Course
4. Click a button
5. Display the entered data

Controller

```
using Microsoft.AspNetCore.Mvc; using MONTECILLO_LabActivity2.Models;
namespace MONTECILLO_LabActivity2.Controllers { public class
StudentController : Controller { // Displays the form [HttpGet] public
ActionResult Index() { return View(); } // Handles form submission
[HttpPost] public ActionResult Index(Student pupil) { return View(pupil);
} } }
```

- `[HttpGet]` → loads the page
- `[HttpPost]` → receives form data
- ASP.NET automatically maps textbox values to the `Student` model

View (The Form)

```
@model MONTECILLO_LabActivity2.Models.Student @{ ViewData["Title"] =
"Student Form"; } <div class="container mt-4"> <h2 class="text-primary
mb-3">Student Entry Form</h2> <form asp-action="Index" method="post"
class="card p-4 shadow-sm"> <div class="mb-3"> <label class="form-
label">Student ID</label> <input type="number" class="form-control"
name="Id" /> </div> <div class="mb-3"> <label class="form-label">Name</
label> <input type="text" class="form-control" name="Name" /> </div> <div
class="mb-3"> <label class="form-label">Course</label> <input type="text"
class="form-control" name="Course" /> </div> <button type="submit"
class="btn btn-primary"> Submit </button> </form> @if (Model != null) { <div
class="card p-4 mt-4 shadow-sm"> <h4 class="text-success">Entered Student
Information</h4> <p><strong>ID:</strong> @Model.Id</p> <p><strong>Name:</
strong> @Model.Name</p> <p><strong>Course:</strong> @Model.Course</p> </div>
} </div>
```

How the Interaction Works

1. User enters data in textboxes
2. User clicks "Submit" button
3. Form sends data to: **StudentController → Index (POST)**
4. Controller receives data as a `Student` object
5. Controller sends the model back to the View

6. View displays the entered information
